

LDAP Integration for Timesheet 7.0

Are you tired of hearing your users complain that they already have too many login names and passwords to remember? Do you wish that even a single part of your critical business infrastructure would let you allow them just to use their regular network logon instead of requiring its own specific information? We've got good news for you. The Journyx Timesheet LDAP Integration allows you to do just that.

Better still, it doesn't matter what your users are using for their Timesheet logins right now. The LDAP Integration will allow them to enter their network login and password into the Timesheet login page to access their Timesheet account. If that's not enough, we even offer an advanced version of the tool that allows you to have Timesheet create and update users' accounts in Timesheet based upon the data in the LDAP store.

LDAP Integration – Unique Problem, Unique Solution

Every company's network is different. And that means that LDAP configurations vary, too. That's why a generalized, one-size-fits-all solution is hard to come by for LDAP integrations. That's also why LDAP integration isn't standard with Timesheet - there's just enough that's unique in any LDAP integration that we include some budgeted time for a Journyx Professional Services Developer to work with the IT staff of your company to get the Timesheet LDAP Integration installed and working. This budgeted time is specifically for setting up the LDAP integration; building new features into the LDAP integration is outside the scope of this package. But have no fear, we'll be happy to work with you on any custom needs; they'll just have to be billed separately.

LDAP Integration Options & Basic Features

There are two different versions of the LDAP Integration: *password only* and *full user integration*. Further, because Timesheet runs on both Windows and UNIX/POSIX, there are separate implementations of the LDAP Integration for both platform types.

Features and requirements of both versions of the LDAP Integration for Timesheet:

- Timesheet logins can either match or not match network logins.
- Timesheet makes real-time queries to the LDAP store for password verifications, and never stores the network passwords internally.
- You can choose whether or not to allow Timesheet logins and passwords to continue to work as a fail-over for Timesheet accounts that don't map to network accounts, like the Timesheet Administrator account or Customer Reporter accounts.
- You can configure an LDAP user field to control whether or not each user has authorization to log in to Timesheet.
- The Timesheet application server must be within the domain of the LDAP server.
- Timesheet must have an administrator role account in LDAP, and the password for the account is stored in an encrypted form on the Timesheet server only—not available from the web interface.
- Timesheet installations on UNIX/POSIX will communicate with any current-version LDAP store on UNIX/POSIX.
- Timesheet installations on Windows will communicate with any current-version Windows Active Directory.

Additional Full User Integration Version Features

The following additional features are supported in the *full user integration* version of the LDAP Integration only:

- Timesheet user account fields are mappable to LDAP fields.
- Each time a user logs in their user account in Timesheet is updated with the then-current data about them from LDAP.
- The first time that a user enters their network credentials in to the Timesheet login page, the integration creates their Timesheet user account – so you do not have to set up user accounts in advance. (Note that this may require some configuration changes in your LDAP store to contain needed Timesheet configuration data.)

Pricing And Availability

The Journyx Timesheet LDAP Integration is available to all customers using Timesheet 7.0 hosted on their own server. Pricing for the LDAP Integration is based on type of integration and the platform on which your organization is running Timesheet. Please contact your Journyx Sales Team representative at (800) 755-9878, extension 1 for Timesheet LDAP Integration pricing details.
